

# Evolution, Ecology and Population Biology

## Seminar–Fall 2015, *Thur. 4:10pm, Rebstock 322*

<i>Date</i>	<i>Speaker</i>	<i>Title/Topic</i>	<i>Affiliation</i>
September 17	Matt Hufford	TBA	Iowa State
September 24	Rae Crandall	Biodiversity, invasions, and restoration in dynamic, fire-maintained landscapes	WUSTL
October 1	NONE		
October 8	Robert Sussman	A history of race and racism	WUSTL Dept. of Anthropology
October 15	Rebecca Bart	Dissecting the disease triangle of host-pathogen interactions	Danforth Plant Science Center
October 22	Bob Marquis	When native insects influence the success of an exotic insect species: the role of ecosystem engineering and the Asiatic oak weevil	UMSL
October 29	Michael McKain	Modern Effects of Ancient Polyploidy: Evolutionary History of the Maize Genome	Danforth Plant Science Center
November 5	Katie Westby	Not all mosquitoes are created equal: how basic ecology can help us understand vector-borne disease	WUSTL
November 12	Jennifer Gruhn	A treeline species distribution, shaped by climate and glaciers: the evolutionary trajectory of whitebark pine	WUSTL
November 19	Rainer Will Bussman	From magic to molecules - two decades of ethnomedicinal research in Peru	MOBOT
November 26	THANKSGIVING		
December 3	Paul Turner*	Virus adaptation (or not) to environmental change	Yale
December 10	Anna Kukekova	TBA	U of Illinois Urbana-Champaign

\*Student-invited special guest
